

## Modern plant construction made easy – with the GESTRA drainage station QuickEM

A familiar situation: the various suppliers have delivered the valves and accessories to the construction site. Time is tight. Are all the parts there? Does everything fit together properly? Right, time to start welding. But stop: here we have an Ex zone. So, off to the workshop – and be quick about it. Now install everything and check the function. Oh no, a trap was installed wrongly, because of the rush. So we have to remove it and correct the mistake. At last, we're done!

All this is much easier with the GESTRA drainage module QuickEM, because it is ready for action: mounted and interconnected with all the valves, with or without bypass and available in the nominal sizes 15, 20 and 25.

All you have to do is decide beforehand on the steam trap BK, MK or UNA. Electronic 24h monitoring is also possible. And, as with all GESTRA products, we are happy to help you.

### The benefits for you are clear:

- ▶ Space-saving arrangement of the valves
- ▶ Components always mounted correctly
- ▶ Reduced installation effort
- ▶ No welding work
- ▶ No painting needed
- ▶ Simple ordering procedure
